Lab & Production Materials

Photoredox catalysis and photoreactors enable reproducibility in your research.

Chemists have long struggled with reproducibility in photoredox catalysis. Both varied reaction setups and individual reactions performed with the same setup can be tricky. Our new labware seeks to alleviate these issues by providing photoreactors for each stage of reaction development while ensuring high levels of consistency across reactions and between runs. When combined with our broad portfolio of iridium and ruthenium catalysts and acridinium-based photocatalysts, these tools free synthetic chemists to focus on their next breakthrough.

Reaction Optimization

The SynLED Parallel Photoreactor 2.0 is the next generation in the SynLED product line. It was designed to facilitate reaction optimization as well as rapid library synthesis ensuring high levels of consistency across reactions and between runs.

SynLED parallel photoreactor (Z744080)

Features include:

- Bottom-lit LEDs (360 or 450 nm) across a 4 × 4 reaction block array provides consistent light intensity (320 lm) and angle (60° and 45°, respectively)
- New heat exchange system provides consistent temperature for each parallel reaction
- Compatible with 1–2 dram scintillation vials or microwave vials with O.D. of 1.7 cm or less
- Performance quartz LED cover protects LEDs from solvent while allowing excellent light penetration
- Designed to fit on a conventional stir plate; and is compatible with IKA brand stir plates

The Penn PhD Photoreactor m2 is a benchtop instrument designed for you to accelerate chemical reactions using photoredox catalysis. The Photoreactor m2 combines LED illumination, mechanical stirring, and cooling into one device. Define parameters of temperature, intensity, stir rate and time to improve repeatability, traceability, efficiency, and consistency of your results. The Photoreactor m2 allows you to streamline synthetic sequences and create valuable strategies for addressing some of the challenges of molecule construction in drug discovery.

Penn PhD Photoreactor m2 (Z744035)

Features include:

- Complete benchtop instrument
- Modular design can be used at a variety of wavelengths from 365–450 nm.
- 360-degree reflective environment maximizes surface-area photon capture.
- Light shield interlock prevents user exposure to harmful rays.
- Interactive touch screen controls reaction parameters.
- Intertek ETL, CE, and CB approved for safety, quality, and performance.
- User defined parameters: temperature, light intensity, fan speed, and stirring
- Auto stop, pause, and reset options
- Supports gas chromatography vial sizes 4, 8, 20, and 40 mL.
- Temperature feedback using a k-type thermocouple
